

Visitor Management System (VMS)

Secure, seamless, and enterprise-ready visitor journeys - from pre-registration to exit.

SecoreX VMS helps organizations digitize visitor operations, strengthen security controls, and deliver a professional arrival experience across corporate offices, campuses, manufacturing facilities, data centers, and critical sites.

<p>Pre-Registration Invite visitors in advance and capture required details before arrival.</p>	<p>Faster Check-In Reception-led or self-service workflows with reduced wait time.</p>	<p>Security & Compliance Photo capture, ID validation, approvals, badges, and audit trail.</p>	<p>Enterprise Integration Connect with access control, HR, directory, and notification systems.</p>
------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------

Why organizations choose SecoreX VMS

- Replace paper registers and fragmented visitor processes with a controlled digital workflow.
- Improve front-desk efficiency with guided check-in, approvals, and automatic notifications.
- Enforce site-specific rules such as NDA acceptance, safety briefing, host approval, and badge issuance.
- Maintain a searchable audit trail for every visit, movement, and exception.
- Support enterprise deployments across multiple sites, business units, and customer environments.
- Integrate visitor events with broader identity, access, and security operations within the SecoreX platform.

Core capabilities

<p>Visitor Experience</p> <ul style="list-style-type: none"> • Pre-registration and appointment scheduling • Host notifications and approval workflows • Walk-in and repeat visitor handling • Self-service or reception-assisted check-in • Badge/label printing and gate pass generation 	<p>Security & Compliance</p> <ul style="list-style-type: none"> • ID capture, photo capture, and document storage • NDA / policy acknowledgement • Watchlist / blacklist checks • Safety induction / training confirmation • Full visit history and audit reporting 	<p>Operations & Integration</p> <ul style="list-style-type: none"> • Multi-site configuration and visitor categories • Integration with access control and directories • Email/SMS/WhatsApp style notifications as configured • Dashboard, reports, and occupancy visibility • Configurable workflows for employees, vendors, contractors, and guests
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Typical visitor journey

<p>1. Invite Visitor is pre-registered by host or reception with date, time, and purpose.</p>	<p>2. Approve Approver/host validates the request based on defined rules.</p>	<p>3. Arrive Visitor checks in at the reception desk or kiosk and completes required formalities.</p>
<p>4. Verify Identity, documents, photo, NDA, or safety prerequisites are captured.</p>	<p>5. Access Badge/pass is issued and, where configured, physical access permissions are aligned.</p>	<p>6. Exit Check-out is recorded, visit is closed, and the audit trail remains available for reporting.</p>

Deployment fit

<p>Ideal for</p> <ul style="list-style-type: none"> • Corporate offices and business parks • Manufacturing plants and warehouses • Data centers, labs, and controlled facilities • Enterprises needing centralized governance across locations 	<p>Business value</p> <ul style="list-style-type: none"> • Reduces manual effort and reception bottlenecks • Improves security posture and compliance readiness • Creates a professional visitor experience • Supports standardized and scalable visitor governance
